ADITYA UNIVERSITY

Object Oriented Programming through CPP
Internal Examination-1 Question Bank

	UNIT - 1
1	List any four key differences between C and C++.
2	List and briefly explain key concepts of Object-Oriented Programming.
3	Explain any four disadvantages of conventional (procedure-oriented) programming.
4	Describe the concept of "data abstraction" with respect to OOP
5	Write a CPP program to demonstrate the scope resolution operator to access a global variable when a local variable with the same name exists.
6	Analyze how namespaces help in avoiding name conflicts in large C++ explain with code snippet.
7	List and explain the uses of Scope Resolution Operator with code snippet of each one.
8	Write a C++ program to demonstrate default arguments.
9	List the Advantages of OOP.
	UNIT - 2
1	What is the purpose of access specifiers in a class? List the three types.
2	Write C++ Program to demonstrate Static variable and static function
3	Explain the difference between friend function and member function.
4	What are inline functions? State two rules for writing inline functions.
5	Write a C++ code snippet to demonstrate an object passed as a parameter to a function
6	Create a class **Rectangle** with a constructor that takes two parameters and displays area.
7	What is Constructor and write the rules for declaring a constructor.
8	Compare and contrast a copy constructor and a constructor with default arguments using examples.
9	Write a short C++ program to demonstrate overloading of a member function named display().
10	Explain how array of objects can be created and accessed in C++.
11	Explain the difference between defining member functions inside a class and outside a class in C++. Illustrate your explanation with suitable code.
12	What is a destructor in C++? Explain the key characteristics of a destructor with suitable examples.
13	Explain Constructor Overloading in C++ with suitable example.
