Data Structures — Internal Exam Question Sets

Set - 01
Q1. Write a C program to find the total and average of n students using structures.
Q2. Implement Merge Sort using arrays.

Set - 02
Q1. Implement a program to evaluate a given Postfix expression.
Q2. Implement Quick Sort using arrays.

Set - 03
Q1. Write a C program to read student name and marks from the command line and display the student details along with the total.
Q2. Implement Radix Sort using arrays.

Set - 04
Q1. Implement Stack and its operations (Push, Pop, Peek, Display) using arrays.
Q2. Perform Insert at Position, Delete at Position and Display operations in a Double Linked List.

Set - 05
Q1. Implement Queue and its operations (Enqueue, Dequeue, Display) using arrays.
Q2. Perform Insert at Beginning, Insert at End, Delete at Beginning, Delete at End and Display operations in a Single Linked List.

Set - 06
Q1. Implement Circular Queue using arrays with all standard operations.
Q2. Implement Stack and its operations (Push, Pop, Peek, Display) using arrays.

Set - 07
Q1. Perform different operations (Insert at beginning, end, middle; Delete; Display) in a Single Linked List.
Q2. Implement Queue and its operations (Enqueue, Dequeue, Display) using Linked List.

Set - 08
Q1. Implement Binary Search Tree (BST) Traversals: Inorder, Preorder, and Postorder.
Q2. Write a C program to copy one structure variable to another structure of the same type.

Set - 09
Q1. Write a C program to find the total and average of n students using structures.
Q2. Implement Binary Search Tree (BST) with Insert, Search, and Delete operations.

Set - 10
Q1. Write a C program to copy one structure variable to another structure of the same type.
Q2. Implement Binary Search Tree (BST) Traversals: Inorder, Preorder, and Postorder.
