The text in the image is: **"4. Describe a situation where lack of respect created conflict."**

Here is an example of how one might answer this prompt:

The Situation: During a team meeting, a junior developer proposed a new approach to solving a persistent bug in the software. Before they could fully explain their reasoning, the lead developer interrupted them, laughed, and said, "That's a terrible idea. We're doing it my way," in front of the entire department.

The Conflict: Because the lead developer dismissed the idea so abruptly and publicly without listening, it demonstrated a clear lack of professional respect. This made the junior developer feel humiliated and undervalued. As a result, the junior developer stopped contributing in meetings and their productivity dropped. The tension between the two escalated until other team members felt uncomfortable collaborating with them, ultimately delaying the project and requiring the engineering manager to step in to mediate the broken working relationship.

'uhv IE-2 question bank-1' with you.pdf

answer these uhv questions 3-4 points . possible make it rememorable like a story

Gemini 3.1 Pro

Here are the answers to the Universal Human Values (UHV) questions from the Aditya University question bank, broken down into 3-4 points each and framed with short, memorable scenarios to help you retain the concepts.

Unit 3: Human Relationships

1. What do you understand by trust in relationships?

- **The Concept:** Trust is the foundational belief that the other person genuinely wants your happiness and prosperity.
- **The Story:** Imagine borrowing your best friend's expensive camera and accidentally breaking the lens.
- **The Application:** Because you trust your friend's core intention toward you, you don't hide the damage; you immediately confess. Your friend is disappointed about the camera but appreciates your honesty, knowing the relationship is more valuable than the object.

2. What problems may arise when trust is broken in relationships?

- **The Break:** When trust is compromised, the foundational feeling of safety is replaced by constant doubt and fear.
- **The Story:** A teenager lies to their parents about going to the library, instead sneaking out to a party, and gets caught.
- **The Consequence:** From that day on, a wall of surveillance goes up. Even when the teenager genuinely goes to study, the parents demand photo proof, transforming a loving home into an environment of exhausting suspicion and tension.

3. What does respect mean in human relationships?

- **The Concept:** Respect is the right evaluation of another human being, recognizing that they are fundamentally similar to you in their desire for happiness, even if their skills or beliefs differ.
- **The Story:** An experienced grandfather and his tech-savvy grandson are building a birdhouse together.
- **The Application:** The grandson respects the grandfather's wisdom in woodworking, while the grandfather respects the grandson's idea to look up a better, modern design on his tablet. They treat each other as equals contributing different strengths.

4. Describe a situation where lack of respect created conflict.

- **The Situation:** During a team meeting, a junior developer proposed a new approach to solving a software bug.
- **The Disrespect:** Before they could finish, the senior manager laughed and publicly dismissed it, saying, "We aren't wasting time on rookie ideas."

- **The Conflict:** Feeling humiliated and undervalued, the junior developer stopped contributing, the team atmosphere became toxic and divided, and the project was ultimately delayed due to the breakdown in communication.

5. Describe how care and guidance play an important role in family relationships.

- **The Concept:** Care is the feeling of nurturing the physical body of a relative, while guidance is ensuring their right understanding and emotional growth.
- **The Story:** A mother notices her young son struggling with his math homework and getting increasingly frustrated.
- **The Application:** Instead of just giving him snacks (care) or doing the math for him, she sits down, calms him, and patiently teaches him the underlying formula (guidance), equipping him to handle future challenges confidently.

6. How do family values influence harmony in society?

- **The Concept:** Society is just a collection of families; the values practiced within the home naturally spill out into the community.
- **The Story:** A family makes it a rule to never waste food and to share their surplus harvest with their neighbors.
- **The Ripple Effect:** The children grow up naturally offering help to their classmates, and the neighbors start their own community garden, proving that the family's internal culture of sharing built a micro-society of harmony.

7. What role do young people or students play in maintaining harmony in society?

- **The Concept:** Youth act as the energetic bridge between traditional wisdom and future innovation, making them the primary drivers of societal change.
- **The Story:** A group of college students realizes their local park is littered and ignored by the municipality.
- **The Action:** Instead of just complaining online, they organize a weekend cleanup drive, inspiring both the elderly residents and young children to join in, thereby uniting the community through proactive leadership.

8. How can human values contribute to peace and harmony across the world?

- **The Concept:** Universal values like compassion and truth transcend borders, politics, and religions, creating a shared human language.
- **The Story:** Following a devastating earthquake in a rival nation, a team of doctors crosses the border to set up medical camps.
- **The Impact:** They treat patients not as "enemies," but as fellow human beings in pain. This act of universal brotherhood dissolves political hostility and fosters international goodwill.

Unit 4: Harmony in Nature

9. What do you understand by self-regulation in nature? Explain with an example.

- **The Concept:** Self-regulation is nature's automatic balancing act, ensuring that no single element destroys the whole system.
- **The Story (The Water Cycle):** The summer heat evaporates water from lakes, which seems like a loss. However, this forms clouds, which eventually burst into monsoon rains, refilling those exact same lakes.
- **The Lesson:** Nature inherently knows how to replenish what it uses, maintaining a perfect, continuous loop without human intervention.

10. How do plants and animals help each other in nature? Describe a real-life example.

- **The Concept:** Mutual fulfillment means two different entities interact in a way that benefits both and harms neither.
- **The Story (Bees and Flowers):** A bee lands on a blooming flower to drink nectar, which it desperately needs to make honey for its hive.
- **The Fulfillment:** As it drinks, pollen sticks to its legs. When it flies to the next flower, it drops the pollen, allowing the plants to reproduce. Both survive and thrive because of the other.

11. How can we observe co-existence in our daily life? Write two examples.

- **The Concept:** Co-existence is living together peacefully by recognizing our interdependence with everything around us.
- **Example 1 (Micro level):** A farmer planting a variety of crops side-by-side, knowing that the tall corn provides shade for the fragile beans, while the beans fix nitrogen in the soil for the corn.
- **Example 2 (Macro level):** A diverse apartment building where residents celebrate Diwali, Christmas, and Eid together, sharing food and respecting each other's traditions.

12. Describe a situation where lack of harmony created problems in society or environment.

- **The Disruption:** Greed often drives humans to break nature's self-regulating cycles, prioritizing short-term profit over long-term survival.
- **The Story:** A textile factory decides to save money by dumping untreated chemical dyes directly into the local river.
- **The Consequence:** The water becomes toxic, killing the fish that local fishermen rely on, poisoning the soil of nearby farms, and causing severe health issues for the villagers, completely destroying the local ecosystem and economy.

13. What do you understand by natural acceptance? Explain with an example from your personal life.

- **The Concept:** Natural acceptance is your innate, unconditioned inner voice that immediately knows what is universally right or wrong, without needing anyone to teach you.
- **The Story:** You are walking down the street and see an elderly person drop their groceries.
- **The Application:** Before you even think about it, your immediate, natural urge is to help them pick the items up. You don't need a law or a teacher to tell you to do this; it feels fundamentally right to be helpful.

Unit 5: Professional Ethics and Values

14. Explain how values guide human behaviour and decision-making in daily life.

- **The Concept:** Values act as an internal compass, steering us toward ethical choices even when no one is watching.
- **The Story:** A student finds a wallet containing a large amount of cash on an empty bus. They are struggling to pay their own rent.
- **The Decision:** Because they hold "honesty" as a core value, the temporary relief of stealing the money is outweighed by the long-term guilt it would cause. They hand it to the bus driver, choosing integrity over quick profit.

15. Give an example where lack of ethical conduct caused harm to society or environment.

- **The Breach:** Unethical conduct usually involves taking shortcuts that endanger others for personal gain.
- **The Story:** A construction company wins a contract to build a public bridge but secretly uses cheap, substandard steel to pocket the extra budget.
- **The Harm:** Two years later, the bridge collapses during heavy traffic, leading to loss of life and massive economic damage, proving that a lack of ethics eventually translates to physical harm.

16. How can education help students develop values, responsibility, and social awareness?

- **The Concept:** True education isn't just about memorizing facts; it's about developing the "right understanding" of one's role in the world.
- **The Story:** A school introduces a mandatory community service program where students must volunteer at an animal shelter.
- **The Transformation:** Through direct interaction with abandoned animals, the students naturally develop empathy, learn the responsibility of caretaking, and become socially aware of the stray animal crisis in their city.

17. What do you understand by professional ethics?

- **The Concept:** Professional ethics is the application of universal human values (like honesty, transparency, and justice) within your specific career or workplace.

- **The Story:** An accountant working for a large corporation discovers a tax loophole that is technically legal but highly deceptive to investors.
- **The Application:** Guided by professional ethics, the accountant refuses to process it and reports the issue to the board, prioritizing transparency and the public's trust over the company's short-term financial gain.

18. Describe an example where modern technology caused environmental problems.

- **The Imbalance:** When technology is developed without considering mutual fulfillment with nature, it creates massive ecological debt.
- **The Story:** The rapid rise of disposable e-cigarettes and fast-fashion electronics created a massive market for cheap, single-use lithium batteries.
- **The Problem:** Millions of these toxic batteries end up in standard landfills, leaking harmful chemicals into the groundwater and soil, creating long-lasting environmental damage for a few moments of convenience.

19. What steps can individuals take to practice human values in daily life?

- **The Approach:** Values are practiced through small, consistent, conscious habits rather than grand gestures.
- **Step 1 (Self):** Start the day with gratitude, acknowledging the efforts of your family and the resources of nature you will use.
- **Step 2 (Others):** Practice active listening and speak respectfully to everyone you encounter, from the CEO to the janitor.
- **Step 3 (Nature):** Make conscious consumer choices, like carrying a reusable water bottle or turning off unused lights, showing respect for physical facilities.

20. Describe a situation where values influenced an important decision in your life.

- **The Crossroads:** Major life decisions often force us to choose between physical facilities (money) and right understanding (purpose).
- **The Story:** A fresh graduate receives two job offers: a high-paying role at a tobacco company known for deceptive marketing, and a moderate-paying role at a renewable energy startup.
- **The Decision:** Guided by the value of "social harmony," the graduate chooses the startup. They realized that inner peace and the satisfaction of contributing to a healthier planet were far more valuable than a larger paycheck.
