Introduction

An analogy is a comparison that explains a complex idea by highlighting similarities to a familiar one, often using relationships between pairs of items. It goes beyond metaphors to demonstrate how two different things share a parallel structure (A:B :: C:D). Analogies are used to simplify concepts, improve comprehension, and form logical connections, frequently appearing in verbal, numerical, and image-based reasoning tasks.

Common Problem Types

Verbal/Semantic: Focuses on word meaning (e.g., "hot" is to "cold" as "fire" is to "ice").

Numerical: Based on mathematical patterns
(Ex: 10:100::5:25)

Alphabetical: Based on letter positioning and transformations.

Example

Function: "Life is like a box of chocolates—you never know what you're going to get" (explaining unpredictability).

Structure: "Tree is to forest as house is to city" (part-to-whole relationship).

Cause/Effect: "Gift" is to "joy" as "tears" is to "sadness"
