Introduction

Coding and Decoding

- The coding questions will provide you with some information that is in code form. This information can be decoded using the key that is present either within the question or within the options.

Letter Coding

- This is the code that is derived on the basis of alphabets. usually, the position of alphabets is used.

Concept and Definitions

Number Coding

In this if letters of words are coded in number, then we have to decode it in particular letters and vice-versa.

Symbol Coding

In the symbol coding, we use the symbols like “!@#$%^&*()_”, to represent words or letters. These codes are then used to determine a code for the words that are written

Questions

Ques 21. **In a certain code language,**

‘Ajay like Batman movies’ is written as ‘@Y4, $E4, &N6, #S6’

‘Vidya loves bowling sport’ is written as ‘%T5, $S5, &G7, ⋆A5’

‘ISRO launched Mars mission’ is written as ‘$D8, #N7, !O4, #S4’

‘Visual basic language support’ is written as ‘&C5, $E8, %T7, ⋆L6’

The code for the word ‘Mars’ is?

1.@M4 2.%E6 3.#S4 4.@R4

5.None of these

Here in code of word

1) First element is symbol that represent first letter of that word.

2) Middle element is a letter that is last letter of word.

3) Last element of code is number that represent number of letter i

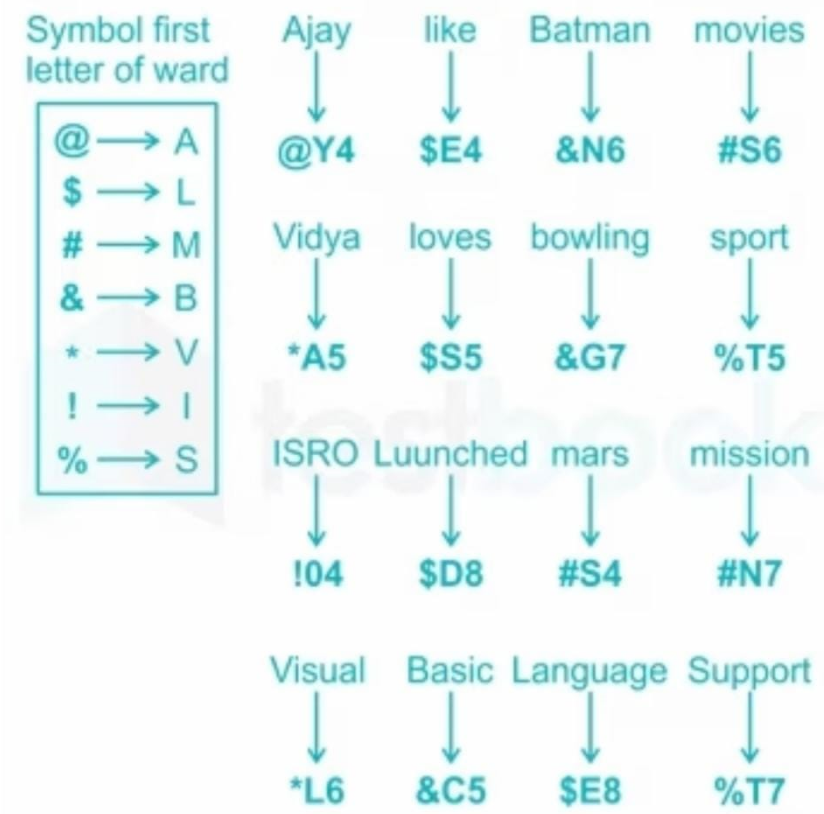

Ex: Ajay will be written as @Y4.

Where @ → represent first letter of word which is A.

Y → represent last letter of word.

4 → represent number of letter in that word.

According to above logic we can code word as represent below.

According to above coding **Mars** is coded as **#S4**

Hence code for word **Mars** is **#S4**
